

C-9 (Formerly SD-10)

AAD has always had an affinity for creating amazing sounding products which offer the utmost in performance, reliability and affordability. We took our knowledge of speaker design and applied this art when we originally built the SD-10, our most affordable subwoofer. The SD-10 has since become a favorite among AV and music enthusiasts alike offering incredible bass response and flexibility in an unusually economical package, but it has always been considered a rogue subwoofer here at AAD, so we've decided to rename it and give it home.

The C-9 consists of a long throw 10 inch poly-fiber cone driver precisely integrated with a high current discrete subwoofer amplifier and enclosed in a heavily damped enclosure to eliminate unwanted resonance and coloration. The C-9 is complete with high-level and RCA line-level inputs, fully variable crossover and phase control allowing seamless integration. Signal overload protection is handled by AAD's Optical-Compression circuitry, which prevents driver damage during any possible overload situations without affecting sound quality.

C-9

Amplifier:110watts RMS into 4 OHMS class A/B

Driver: long throw 10" natural fiber cone, rubber surround

Grill: Black, perforated steel

Features: Variable x/o 30-160Hz, Variable phase 0-180 degrees, Main Volume control. High (5 way posts) and low level (RCA) inputs and outputs. Detachable IEC mains input cable. Auto on/off switch.

**Dimensions(HXWxD):432x320x406(mm)
17x12.6x16(inch)**

Net Weight:17Kg / 37Lbs
