

The CS-01 stand is ideal for use with the C-260, C-150 or any number of mini-monitors on the market today. Its bottom plate has been heavily treated with a dampening material to reduce floor interaction and vibration and its twin heavy gauge metal poles can be filled with dampening material making the CS-01 a very inert speaker stand. The top plate is covered in a rubber padding to further eliminate transmission of frequencies and resonance. Available as shown only.
