

CLOSER TO THE ZERO™

THAN EVER BEFORE...

ISM The 0.5™ Series cables from TARA Labs provide more transparency, more detail and more revealing performance than our legendary The One™ and The 0.8™ cables. The 0.5™ Series cables are the next step in the evolution of the TARA Labs series. Their designs combine the best of the technologies pioneered by TARA Labs over the past 20 years. They are closer to the performance of The Zero™ than ever before.

The 0.5™ Interconnect includes the new HFX Floating Ground Station®, now the most effective way of isolating and absorbing harmful RF interference in the outer shield of the interconnect.

The 0.5™ Interconnect utilizes TARA Labs exclusive Rectangular Solid Core®, Isolated Shield Matrix™, and air-tube® technologies.

**EXTREME TECHNOLOGIES
DELIVER EXTREME PERFORMANCE**
