

# SPECTRUM® SERIES CABLES

## THE STANDARD FOR VALUE AND PERFORMANCE

How do you improve upon your best-selling products of all time? By optimizing the design and adding high-performance materials and designs that meet the needs of today's audio and home theater equipment.

The Spectrum Series offers high-end performance at a modest price. The Spectrum Series includes cables for audio, video, digital, subwoofer, speaker and power cables to advance any sound or home theater system. All of the cables in this series feature SA-OF8N® copper, TARA Labs' (Super-Annealed™ Oxygen Free 99.999999% pure copper), in the Optimized Diameter™ Solid-Core format—the purest conductor material available.

**Spectrum Audio Cables.** These unique cables provide increased conductivity and a more coherent sound. But the real magic is in the geometry, the interior configuration of the elements within the cables. The sound is optimized by the unique configuration of the conductors that are designed to accurately reproduce a more exact representation of the audio signal. TARA Labs' SVPE™ (Stable-Valence Polyethylene) insulation is chemically treated to be the least reactive, and is more stable than other dielectric or insulation materials, so the sound you hear is distortion free.

**Spectrum Video Cables** conquer the final frontier of home theater. Available in component and composite versions, its solid core SA-OF8N™ design offers increased contrast ratio, brightness, and sharpness and enriched color saturation. TARA Labs has everything to enhance the picture quality of any home theater.

**Spectrum Digital Cables.** The Spectrum Digital Cable rejects outside interference and provides a clear signal path to facilitate the speed and accuracy of digital signal transmission, resulting in a clean and clear sound that will advance the performance of your audio and home theater equipment.

**Spectrum Speaker Cables.** High-end speaker cables from TARA Labs will enhance the performance of your audio or home theater system and it can be more affordable than you might think. With its 12 gauge conductor construction and SA-OF8N®, these cables offer improved coherency and musical accuracy, with more natural mid-range and extended clear highs.

**Spectrum Subwoofer Cables** offer superior bass with high current conductor design for excellent bass punch and control. TARA Labs subwoofer cable is specifically designed for the unique demands of subwoofers that can supply important information across the frequency spectrum to produce a realistic soundscape.
